Improvement of luminescence properties of $\text{LaSrAl}_3\text{O}_7:\text{Eu}^{3+}$ phosphor

M.S. Mendhe, P.P. Bhure, P.C. Dhabale, S.G. Revankar, S.P. Puppalwar*

Department of Physics, Kamla Nehru Mahavidyalaya, Nagpur-440024, India

Abstract

A red phosphor $\text{LaSrAl}_3\text{O}_7:\text{Eu}^{3+}$ were synthesized by the solution combustion technique. Their structural and luminescent properties were investigated. The Eu^{3+} doped $\text{LaSrAl}_3\text{O}_7$ phosphors were excited by n-UV light and exhibited a prominent red emission which is due to the D → F transitions. The incorporation of Li^+ , Na^+ , and K^+ ions as compensator charge, the luminescence intensity of $\text{LaSrAl}_3\text{O}_7:\text{Eu}^{3+}$ greatly enhanced. Addition of Li^+ ions in the phosphor shows strongest emission among used charge compensators. The CIE chromaticity (x, y) of $\text{LaSrAl}_3\text{O}_7:\text{Eu}^{3+}, \text{Li}^+$ sample were obtained (0.68, 0.31) and it is close to the standard red chromaticity of NTSC. $\text{LaSrAl}_3\text{O}_7:\text{Eu}^{3+}, \text{Li}^+$ is a good candidate phosphor for red light emitting diodes.

Abstract : Vehicular Ad-hoc Network today has become a research sector for anatomization and headway. It is a subclass of MANET (Mobile Ad-hoc Networks), which provides a transmission among nearby vehicles and predetermined fundamnet. VANET is different from MANETs in terms of high mobility and dynamic topology. Sustaining inflated mobility and information routing in vehicular ad-hoc networks is very demanding and formidable job. Key characteristics of VANETs are time-varying nature of vehicle density, time critical welfare implementations, self-organizing, distributed communication, road pattern restrictions and high mobility. Sudden change in network topology and connectivity are also the characteristics of VANET. VANET provides amenities regarding road safety, traffic management, internet access, map location, for passengers and drivers. In this paper we've described a brief overview on topologies based protocol: proactive and reactive routing protocols.

Keywords: VANET, MANET, Protocols

1. INTRODUCTION

A transport impromptu Network (VANET) consists of vehicles that communicate with one another and exchange information via wireless communication links obtainable between the vehicles that area unit in communication ranges of vehicles to boost the road safety in town. The communication between vehicles is employed to produce road safety, comfort and diversion. The performance of communication depends on however higher routing takes place within the network. Routing information between the supply and destination vehicle depends on the routing protocols being employed in transport ad-hoc network. VANET may be a taxonomic category of painter (Mobile Ad-hoc Networks), that provides a communication among close vehicles and between vehicles and close mounted infrastructure. VANET is totally different from MANETs in terms of high quality and dynamic topology. Maintaining High quality and knowledge routing in VANETs is incredibly tough and difficult task. In VANET moving vehicles area unit thought-about as node and therefore the distance between moving vehicals area unit thought-about as nodes and therefore the distance between them on the road is taken into account as network.

Video Playing Using QR Code

¹Dhanlaxmi Gainer, ¹Kaustubh Zade, ¹Shubham Khobragade, ¹Harsh Tiwari, ² Dipak Khadse
¹BE Students, Department of Computer Science and Engineering, Priyadarshini Bhagwati College of Engineering, Nagpur, Maharashtra, India
²Assistant Professor, Department of Computer Science and Engineering, Priyadarshini Bhagwati College of Engineering, Nagpur, Maharashtra, India

Abstract — this system aims at giving authorized knowledge to the user at ease via visual sensing i.e. videos. Especially this android application made for the persons for whom understanding via visual medium is easier than theory. Here, in this system a demo book will be provided in that book, in Index topic wise name and QR code will be given. So even if the user doesn't have a single idea about the book he still can just scan the QR code via app from his mobile phone and the video will just simultaneously start playing in inbuilt video player. Specially meant for user to provide ease and authorized knowledge. In this system, as soon as the QR is scanned from the android device, the video will start playing instantly. A QR (quick response) code is a two-dimensional barcode readable by QR scanners, smart mobile phones with a camera. QR codes can be used to link to any URL. They can also be used to automatically add information into a user's Smartphone such as a calendar event, map or personal contact information. A QR code is capable of storing several hundred times more information than conventional barcode and is readable from any direction. A QR Code system is used in combination with a QR Code printer (or QR Code creation software) and QR Code scanner. QR Code is generated with QR Code creation software and a special printer. A QR Code is a matrix code (or two-dimensional bar code) created by Japanese corporation Denso-Wave in 1994. The "QR" is derived from "Quick Response" as the creator intended the code to allow its contents to be decoded at high speed. QR i.e. "Quick Response" code is a 2D matrix code that is designed by keeping two points under consideration, i.e. it must store large amount of data as compared to 1D barcodes and it must be decoded at high speed using any handheld device like phones.

Index Terms— QR code, 3D barcode, android, scanner, camera, barcode, video player.

1. INTRODUCTION

Image processing is a method to perform some operation on an image in order to get an enhanced image or to extract some useful information from it. Image processing is a method to perform some operations on an image, in order to get an enhanced image or to extract some useful information from it. It is a type of signal processing in which input is an image and output may be image or characteristics / features associated with that image. Nowadays, image processing is among rapidly growing technologies. It forms core research area within engineering and computer science disciplines too.

Image processing basically includes the following three steps:

1. Importing the image via image acquisition tools.
 2. Analyzing and manipulating the image.
 3. Output in which result can be altered image or report that is based on image analysis.
- There are two types of methods used for image processing namely, analogue and digital image processing. Analogue image processing can be used for the hard copies like printouts and photographs. Image analysts use various fundamentals of interpretation while using these visual techniques. Digital image processing techniques help in manipulation of the digital images by using computers. The three general phases that all types of data have to undergo while using digital technique are pre-processing, enhancement, and display, information extraction.
- An image is an array, or a matrix, of square pixels (picture elements) arranged in columns and rows. In a (8-bit) greyscale image each picture element has an assigned intensity that ranges from 0 to 255. A grey scale image is what people normally call a black and white image, but the name emphasizes that such an image will also include many shades of grey. Each pixel has a value from 0 (black) to 255 (white). The possible range of the pixel values depend on the colour depth of the

The image shows a certificate of publication from the International Journal of Scientific Research in Computer Science, Engineering and Information Technology (IJSRCSEIT). The certificate is framed with a blue and yellow border. At the top left is the IJSRCSEIT logo. At the top right, it lists the Scientific Journal Impact Factor as 4.032, Online ISSN as 2456-3307, and UGC Journal No as 64718. The title of the journal is centered in blue text. Below the title, 'CERTIFICATE OF PUBLICATION' is written in green. The reference number 'Ref : IJSRCSEIT/Certificate/Volume 5/Issue 2/4452' and the date '20-Mar-2019' are provided. The main text certifies that Shrunkhala Wankhede has published a research paper titled 'Automatic College Timetable Generation' in the journal, Volume 5, Issue 2, March-April 2019. It also provides a website link for downloading the paper: http://ijsrcseit.com/CSEIT1952169. A blue circular stamp with 'IJSRCSEIT' is on the right. At the bottom left, the Editor in Chief's name and website are listed. At the bottom right, it says 'Peer Reviewed and Refereed International Journal'.

Abstract— The cluster analysis is incredibly huge conception of information mining several researchers square live offer attention on cluster downside. The cluster is member of unattended learning technique during that teacher is absent. throughout this analysis primarily based paper we've got developed the efficient hybrid data processing algorithmic rule. The obtained algorithmic rule known as as BKPSO that contain the Bisecting K-mean algorithmic rule and Particle Swarm optimization algorithmic rule. By victimization this 2 algorithmic rule the hybrid model can get. This hybrid model will increase the accuracy of clustering. The Bisecting K-mean algorithmic rule is use for the clustering, it'll kind the cluster suggests that organizing the article into cluster according their price that is analogous in how. The bisecting K-mean algorithmic rule is modification of the fundamental K-mean algorithmic rule. [it can't'll] cut the most cluster into 2 sub clusters till the K-cluster will kind. It reduced the computation time and additionally reduces the complexness of the information cluster. it's a drawback like initializing the beginning cluster center. to beat this downside and realize the optimum path the particle swarm optimization rule is used throughout this analysis based mostly project the information sets square measure transfer from the UCI Repository. it's one among the general public analysis based mostly University of Golden State in Irvine.

Keywords— UCI Repository data(Car machine Learning Data set; Iris Plants Database); K-mean; Bisecting K-mean algorithm; Particle swarm Optimization technique.

I. INTRODUCTION

Data mining technique finding the prognostic data from recent information and this technology is to assist corporations specialist in the important data in their information bases. Data processing technique means that applying technique on information set for finding helpful data. This method of compliance to electronic necessities that facilitate the analyzing invisible prognostic data from the massive information set, it's wont to testing the recent information to seek out the helpful data. Data processing technique has some technique like classification, clustering, association. In this paper the bunch technique is employed. it's one among the foremost necessary techniques in data

will also test on historical data its give the important data which is help for the prediction. In this research based project the data sets are downloading from the university of Californian in Irvine. We have download two data sets [1] Car machine learning data [2]Iris plant data set.

[2] The second data set is related to the plant data which contain the 150 total numbers of instances 4 attributes like

S_length, S_width, P_length, P_width and 3 classes L_setosa, L_versicolor, L_virginica.

In this scientific research the Bisecting K-mean algorithm is employed for the Grouping analysis, it's the modification of the K-mean algorithmic rule. It produces the cluster in line with their attributes and given range of clusters. In bisecting K-mean algorithmic rule the initial K-mean cluster is splits into sub cluster means that into 2 components. It decreases the complexions of cluster and reduce the computation time. This agglomeration algorithmic rule has downside [1] To initialization of place to begin means that it's tough to perform to initialize the beginning center of the cluster. because of that the optimization technique is employed. during this project the particle Swarm optimization technique used for optimization purpose. It overcome the Bisecting K mean downside and finds the optimum resolution to create the clusters. it'll facilitate to enhance the accuracy of the agglomeration. In real word the optimization drawback square measure dynamic. The optimization technique provides the optimum or best resolution from the difficult optimization drawback.

In this research project we propose the hybrid algorithm that is BKPSO based on Bisecting K-mean algorithm and particle swarm optimization. Particle Swarm optimization algorithmic rule could be a population contain optimization technique that is outstanding by the behavior of swarm of birds, and every swarm is termed as a particle, every particle is said to the rate that helps to search out the new position

II. FLOWCHART OF SYSTEM

In this analysis primarily based project the info sets ar designated from the UCI repository. Its abbreviation is
